Full Environmental Assessment Form Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1 is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Sidney St and Lark St -CSO053_1.4 SP336B RTC (Sidney RTC)				
Project Location (describe, and attach a general location map):				
At the intersection of Sidney St. and Lark St., Buffalo, NY				
Brief Description of Proposed Action (include purpose or need):				
The Sidney RTC will be an underground control structure connecting the Humboldt Parkway situated at the intersection of Humboldt Parkway and Sidney Street, utilizing properties owner house electrical components. The design includes a new 48" gravity sewer running east from complete the interconnection. This sewer will connect to the Scajaquada Tunnel Interceptor Avenue and Lark Street, at a depth of approximately 35 to 40 feet below grade. The installat feature a modulating gate connected to SCADA to balance flow between the Humboldt Park events. The design will encompass: Cast-in-place diversion chamber Remote monitoring and control systems for automated operation and maintenance Civil-site improvements (stormwater management, landscaping, erosion and sediment control.)	ed by the City of Buffalo at Sidney Sin the Humboldt Parkway Sewer, the via a drop shaft approximately 400 fion is anticipated to be executed via way Sewer and the Scajaquada Tur	treet and Lark Street to n north on Lark Street to eet south of Northland open cut. Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.
