Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either “Yes” or “No”. If the answer to the initial question is “Yes”, complete the sub-questions that follow. If the answer to the initial question is “No”, proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. A. Project and Applicant/Sponsor Information.

Name of Action or Project: Delavan Trunk Sewer Improvements Project		
Project Location (describe, and attach a general location map): City of Buffalo		
Brief Description of Proposed Action (include purpose or need): The Buffalo Sewer Authority (the Authority) owns, operates, and maintains the combined sewage collection system within the City of Buffalo, New York. The Authority's Combined Sewer Overflow Long-Term Control Plan (LTCP) was approved by the New York State Department of Environmental Conservation (NYSDEC) and the USEPA in 2014. The LTCP is a multi-year strategy to implement projects to reduce overflows within the Authority's sewer collection system and to ensure that the system reaches target conditions for compliance with the water quality requirements of the federal Clean Water Act. To meet these goals, the Authority is proposing the Delavan Trunk Sewer Improvements Project (the proposed project), which involves upgrades to the Authority's sewer collection system along Florida Street and Spillman Place to control combined sewer overflow (CSO) discharges to Scajaquada Creek. The proposed action consists of two alternatives. Alternative A includes construction and operation of an offline 1.5 Million Gallon deep storage tank located below the Canisius University Surface Parking Lot and an associated above grade building to provide access to supporting electrical equipment and an HVAC vault. Alternative B features an offline 14-ft diameter storage tunnel along with an above grade building for housing electrical equipment and access to supporting tunnel infrastructure.
