Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1 is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Genesee St - CSO053_8 SPP341A Modification		
Project Location (describe, and attach a general location map): Genesee Street, Buffalo, NY 14211 at intersection of Kerns Ave		
Brief Description of Proposed Action (include purpose or need): This project is a Sewer Patrol Point (SPP) modification to incorporate an additional 18-inch diameter underflow pipe and raising the overflow weir to 55.60 ft to achieve a new total flow of 26.4 million gallons per day (MGD) reducing overflows at CSO-053. The existing drop shaft connection to the Scajaquada Tunnel Interceptor at SPP 341A was reviewed and determined to be undersized for the proposed flow, with an original design flow of only 4.43 MGD. A vortex style drop structure is proposed to achieve the desired increased capacity. The small footprint of the vortex plunge design combined with its ability to reuse the existing tunnel connection from the existing drop shaft make this style drop shaft the preferred alternative. The drop shaft replacement would be constructed next to the existing drop shaft and completed offline.
